

Judicial Digital Support Platform

Software Requirements Specification (SRS):

1. Introduction:

- **1.1 Purpose:**

- This document defines the software requirements for the Judicial Digital Support Platform (JDSP).
- The system aims to digitally support judicial processes by improving efficiency, transparency, security, and accessibility while preserving judicial authority and legal compliance.

- **1.2 Scope:**

- The JDSP is a web-based platform designed to assist courts in **managing case workflows, digital documentation, payment processing, Easier to hire a Lawyer, Lawyer Roll Tracking.**

- **1.3 Definitions:**

- JDSP – Judicial Digital Support Platform.
- RBAC – Role-Based Access Control.
- Audit Log – Immutable activity tracking record.

2. Problem Statement:

- The current judicial workflow relies heavily on manual procedures, paper-based documentation and the difficulty of finding the suitable Lawyer for Clients case.
- This results in:
 - Delays in case processing
 - Administrative inefficiencies
 - Limited transparency for litigants
 - Increased operational costs
 - Difficulty tracking case status
 - Difficulty to find suitable Lawyer
- There is a need for a secure digital support platform that enhances judicial processes without replacing the legal authority of courts.

3. Target Users:

- Lawyer
- Client
- court employee

4. System Scope:

- **4.1 In Scope:**

- ❖ Administrative analytics dashboard (Case Tracking Dashboard)
- ❖ Role-Based Access control
- ❖ Case registration and tracking
- ❖ Electronic Payments (local payment (ex. Vodafone Cash))
- ❖ Document Upload & Storage
- ❖ Audit Logging system

(It is an immutable log that records every operation that occurs in the system:

- Who did what?
- When?
- And from where (IP/Device)?
- ❖ User authentication (2FA Authentication)
- ❖ Lawyer susceptibility
- ❖ Hearing scheduling
- ❖ Lawyer Roll Tracking

- **4.2 Out of Scope:**

- ❖ Issue automated judicial rulings.
- ❖ EitherHandle high-risk criminal case trials.

5. Functional Requirements:

- **5.1 Authentication & Authorization:**

- ❖ The system shall implement 2FA for sensitive roles.
- ❖ The system shall enforce RBAC.
- ❖ The system shall log all login attempts.

- **5.2 Case Management:**

- ❖ The system shall allow lawyers to submit new cases.
- ❖ The system shall allow court employees to review submissions
- ❖ The system shall generate a unique case ID.
- ❖ The system shall track case status.

- **5.3 Hearing Management:**
 - ❖ The system shall allow scheduling of hearings.
- **5.4 Payment System:**
 - ❖ The system shall integrate with payment gateways.
(Digital wallet (ex. Vodafone cash, bank transfers, payment gateways (ex. fawry)))
 - ❖ Each payment shall be linked to a case ID or a Lawyer.
 - ❖ The system shall generate digital receipts.
- **5.5 Document Management:**
 - ❖ The system shall allow uploading legal documents.
 - ❖ Documents shall be stored securely.
 - ❖ The system shall record document upload history.
- **5.6 Audit Logging:**
 - ❖ The system shall log all create, update, delete, and view actions.
 - ❖ Audit logs shall be immutable.
 - ❖ Audit logs shall record user ID, timestamp, action type, and entity affected.
- **5.7 Real-Time Communication:**
 - ❖ The system shall provide chat between lawyer and client.

6. Non-Functional Requirements:

- **6.1 Security:**
 - ❖ All communications shall use HTTPS.
 - ❖ Sensitive data shall be encrypted at rest.
 - ❖ The system shall enforce 2FA for judges and court employees.
 - ❖ The system shall implement audit logging.
- **6.2 Performance:**
 - ❖ The system shall support concurrent users (target defined in deployment).
- **6.3 Availability:**
 - ❖ The system shall maintain 99% uptime.

- ❖ The system shall perform automatic daily backups.
- **6.4 Scalability:**
 - ❖ The system shall support expansion to multiple courts.
 - ❖ The architecture shall allow modular scaling.
- **6.5 Usability:**
 - ❖ The UI shall be simple and accessible.
 - ❖ The system shall support Arabic (primary) and English (secondary).
 - ❖ The platform shall be accessible to non-technical users.

7. Constraints:

- Legal compliance with national judicial regulations.
- Data privacy laws.
- Add i think her name herInternet connectivity limitations.
- Budget constraints.
- Resistance to institutional change.
- Some Lawyers cant adapt with online platform subscription

8. Use Cases (High-Level):

• UC-01: User Login

Any User:

1. User enters credentials.
2. System validates credentials.
3. System requests 2FA.
4. User gains access based on role.

• UC-02: Submit New Case

Lawyer:

1. Lawyer uploads documents.
2. Lawyer fills case form.
3. System validates input.
4. Case ID generated.
5. Court employee notified.

• UC-03: Schedule Hearing

Court Employee:

1. Select case.

2. Choose date
3. Define hearing type (online/Physical)
4. Notify involved parties.

- **UC-04: Make Payment**

Lawyer / Client:

1. Select case.
2. Choose payment method.
3. Complete transaction.
4. Receipt generated.

- **UC-05: Lawyer subscription**

Client / Lawyer:

1. Client Selects suitable lawyer for his case
 2. Lawyer checks Client case
 3. Lawyer sends his suitable subscription price
 4. Client accepts, rejects or negotiate with the Lawyer if available
-
